INTRODUCTION

The essential features of the system for classifying the Economics Section of the library are based on a structure for periodicals produced for the American Economic Association (see "Index of Economic Journals" QB 800 I38).

After the first drafts of 1969 and 1972, a first edition was created in 1975. The second edition of 1983 contained additional information, particularly in sectors QH 400, QO and QW.

The third edition of 1987, in addition to some alterations and additions, was mainly a reworking of the sub-section Business Research (QH 400 ff.). Annexed was the extended and reworked Index of Classifications, which replaced the version of 1969 which had by then been out of print for a long time.

The fourth edition to which this is the introduction was more intensively optimized as the advance edition for a group of associated libraries which, due to German Unity, called for reworking in the area of Germany's Economic Policy (QG) and some additions in the sectors of General Business Textbooks (QP) and also to QH, together with a full reworking of the Index, based on the standard key-word file.

INSTRUCTIONS FOR USE

The system covers writings relating to national economics, business management, economic history, statistics and econometrics, in addition to the basic mathematical writings (QH 100 ff) for economics and, in some special sub-groups, labour, tax and business law (particularly under QL, QP, QR and QV) or industrial and labour sociology (Particularly QP 342 and QV 020).

At the same time the monographs are arranged from the general to the particular, by which is meant that the sub-group chosen will be the narrowest into which the monograph can be classified.

It is therefore absolutely essential to look through the respective more general superordinate groups, if all the available writings about a particular problem are to be found. The "General" super-ordinate groups do not only contain mono-graphs, of which the subjects relate to several sub-groups, but also writings for which no appropriate sub-groups have yet been created. Exceptions to this rule are the broadest superordinate groups of Economic Theory (QC 070-072), Theoretical Statistics (QH 230-232) and General Business Management Text-books (QP 120).

Economic theory is almost without exception included in sub-group QC, i.e. it is not to be found under the special subjects; for example monographs on pay theory are not to be found in sub-group QV "Employees" but in QC 220, those on monetary theory are not in sub-group QK "Cash, Credit and Bank Systems, Banking Textbooks" but in QC 320. Deviation from this principle occurs in four cases: Fiscal Theory is in QL, Theory of International Trade is in QM, the hypo-thetical parts of Business Management Theory in QP and Population Theory in QU.

Some remaining difficulties with classifications can only be resolved through prior decisions. Thus, Group QX 000 "Social Policy" includes all books which deal with social security and labour market problems and is also the super-ordinate group for QV 000 "Employees (Labour economics)". Similarly QC "Monetary Theory" and "QK 900 ff. "Monetary Policy" are superordinate to group QM 300 ff "Balance of Payments, Foreign Exchange Rates, International Currency Classification" and contain all books, which deal with money matters and currencies (balance of payments).

Finally it has always been found to be useful to separate the sub-groups QP "General Business Management Textbooks" and QQ "Special Business Management Textbooks" in such a way that monographs which deal with individual problems of special business management subjects are allocated to this, with the exception of investigations into individual problems of industrial management teaching; these are included in the special groups of general

business management textbooks: so that a book about retail trade accounts will be found under QQ 440 "Retail Trade Management Theory", while a book about the accounts of industrial companies will be found under QP 800 "Accountancy".

Under QA are listed journals and other periodical issues (annual reports etc.). Bibliography lines are classified under their respective subject matters.

QB is a relatively heterogeneous sub-group, which contains, in particular, mono-graphs in the following areas: Reference books, dictionaries, bibliographies, commemorative publications, compendia, mixed content material, methodical basis works on economics and subjects related to economic studies and education.

QF contains economic and social history monographs, whenever the subject matter comes under two or more sub-groups. Economic history works on special problems are, as far as possible, classified under the special sub-groups of the individual main groups. A monograph counts as coming under economic history when it deals with events which occurred (or ended) more than 30 years before the book was published. This means that a user working on events which occurred more than 30 years earlier must always look up two groups in the library; in one will be publications by "contemporaries" of the events in question; in QF and in other economics groups will be found research into the same events from the perspective of subsequent generations.

QG contains all monographs, in which aspects of the economic policy of a country belonging to several, different sub-groups are investigated. Works on special economic policy problems are, as far as possible, classified under the special groups within the other main groups.

QE contains educational history monographs, where these discuss either the opinions of individual schools or those of at least two economists. If the mono-graph exclusively considers the work of one economist, then it will be found, in all cases, under QE 800. When investigating the educational history of a particular subject, the respective historical works will, similarly, be classified under the sub-groups of that subject.

Business management works are to be found in the sub-groups:

QP	General Business Management Textbooks
QQ	Special Business Management Theories
QH 400 ff	Business Research
QK 300 ff	Banking Textbooks
QL 800 ff	Business Management Taxation Textbooks
QS 400	Farm Management Textbooks
QV 570 ff	Personnel

QE 050	History of Business Management Textbooks
QH 243	Business Statistics
QH 244	Statistical Methods in Market Research

Important empirical teaching material on Business Management is also to be found in the sub-groups

QK 400 ff	Commercial Banks
QK 500 ff	Institutional Investors other than Banks
QL 500 ff	Taxation Law
QL 600 ff	Individual Taxes
QR 500 ff - 900 ff	Individual Business Sectors
QT 360	Land Market and Land Value
QV (all of it)	Employee Subjects

The structure is based on an index of subjects, for which the concepts correspond to the keyword files. This index is intended mainly as an aid to researchers for finding a point of entry into the respective section of the system. The correctness of the offered section of the system then has to be checked against this. In the meantime (as with QR 500) the only possible group accessed is the one in which the individual section of the system must first be determined.
